Dear Members of Ontocop,

Providing your insight into what the facet structure should be, it helps to configure the Information Science (IS) Taxonomy. Information science is multidiscipline as remarked in the literature; many studies have investigated to identify this science. Information Science (IS) has a fundamental root of its theory which is emerged from other sciences such as: Library science, computer science and archival science.

- 1. In this part which is the High level of the taxonomy of assessment could you please, let me know to any extent you are agreeing with this division. Also, check the fundamental facets at the general level of Information science ontology, by
 - a. revising or adding further concepts
 - b. Formulated it in a new schema. which are namely:

2. What you think about the categorizing Actor, could you please, organize them in a logical order.
